# 1 Login Screen

This is the wireframe concept for the login screen for the FlyDreamAir loyalty program this will be the screen layout that users will be presented with when attempting to login to the system. It has a basic minimalist layout with the company logo close to the center of the screen just above the login form and large enough to make it the dominant element, this makes it clear to users where they are and what they are about to login to. The login form has been styled in such a way that it does not look like a normal web form this makes it more eye catching to the user but still looks enough like a login for that the user will be able to identify what it is. The form is within a box in the center of the screen just below the company logo, the corners of the box have been rounded to soften the look and feel of this screen. The form fields have icons next to them to visually indicate to the user what the field for as well as a place holder within the field labelling the fields, this helps reduce the amount of space taken up around the fields and make the form look less cluttered and a button that matches the shape of the box around it giving a sense of consistency with the softness.

## 2 Main loyalty program screen

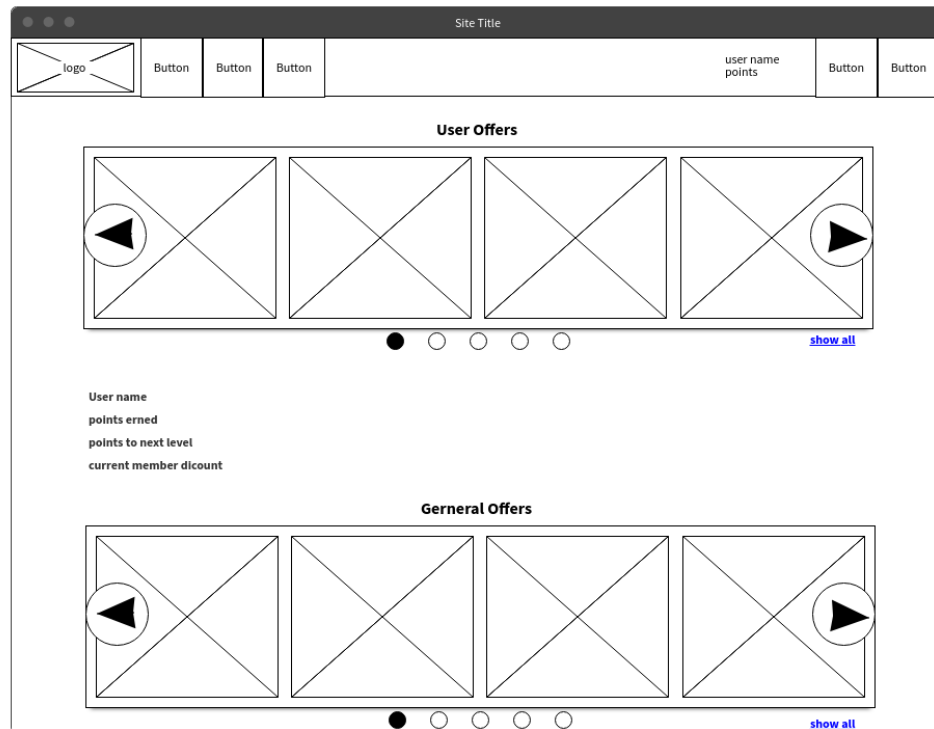

The main screen went through a few design changes before landing on the layout we eventually chose to use.

This wireframe of the main screen was the first we came up with for the main screen, it features a simple navigation bar across the top of the page where the company logo is displayed on the left big enough to be seen and identified and with enough padding around the logo to make it stand out from the rest of the elements around it and not overwhelmed by them. Then next to the logo there is navigation buttons that will take the user if clicked on to the other parts of the web site. On the right there is two more buttons an about that will be a link to the companies “About me” and the logout, they have been put there to distinguish them from the other user navigation features and to prevent accidental logouts while navigating the site.

The main section of the page is where all the offers available to the user are displayed in a list, there are two lists one for user specific offers and the other will be general offers that would be available to all members. However, with this lay out the user will have to do a lot of scrolling to see all the offers and it made the page feel over cumbersome.

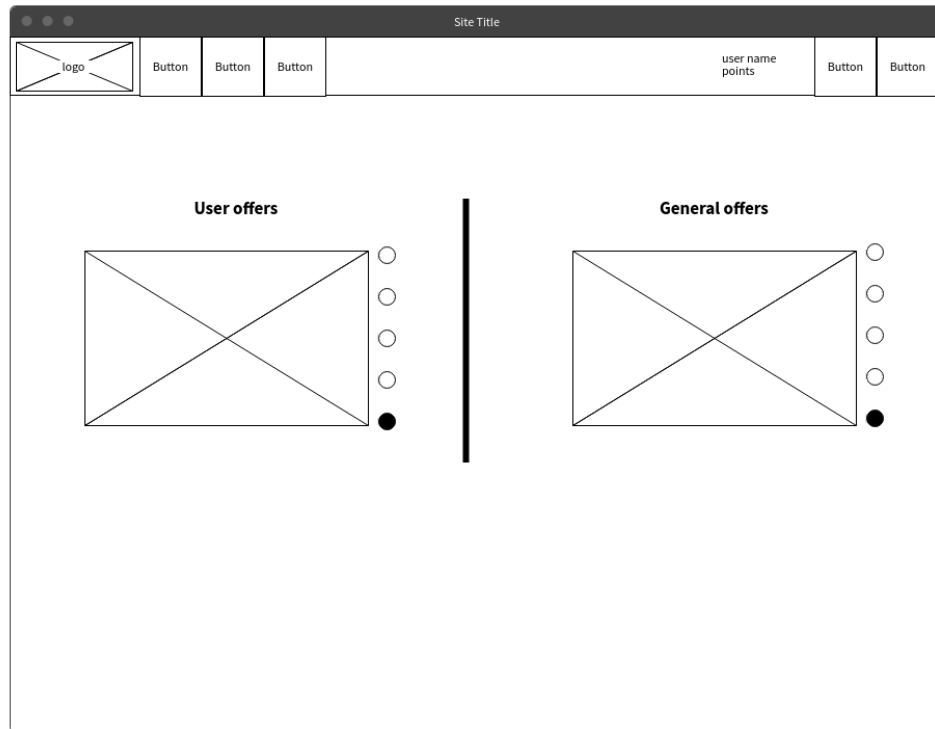

## Project UI Interface Prototypes

This wireframe is the second rendition of the main screen it features the same navigation bar at the top but the user name and points information has been moved to the right of the bar to make the bar feel less cluttered but still provide the user with the information needed while logged in.

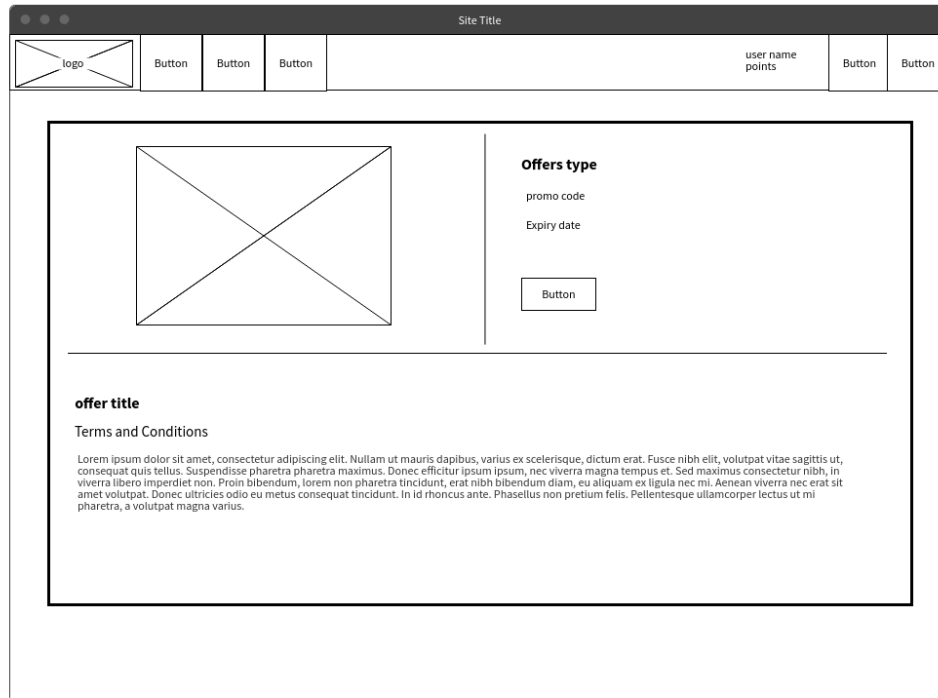

With this screen we moved the lists from the previous wireframe and made them horizontal carousels which significantly reduced the need to scroll the page to see all the offers available these carousels auto scroll at a set interval. And added in some user specific information to the account between the carousels to space them out. However, this layout made the page feel over cluttered with information and a lot of things going on with the carousels that the user may feel lost in all that is going on with this screen.

## Project UI Interface Prototypes

This is the wireframe layout that was eventually chosen to be our main screen it blends the best of both of the other two lay outs providing a minimalist design that is not cluttered and all available offers will be seen without the need of lots of scrolling as the carousels will loop through the offers and allow manual scrolling of the carousels, this keeps the focus of the user on the offers they have available with out over loading the user with lots of information.

### 3 Offer Detail Screen

This is the wireframe concept for the offer details, this screen will be presented to the user when a user clicks on an offer displayed to them, it provides the user with detailed information about the offer and allows the user to use the offer. The screen has been separated into three sections the first is the image of the offer that allows the user to visually identify what offer they are looking at based on the image. Then there is the basic offer details on the right of the image that details the offers title, promocode, expiry date, how many points are needed for the offer and an accept button. At the bottom section there is the terms and condition information for the offer. Each section is clearly marked and labelled.

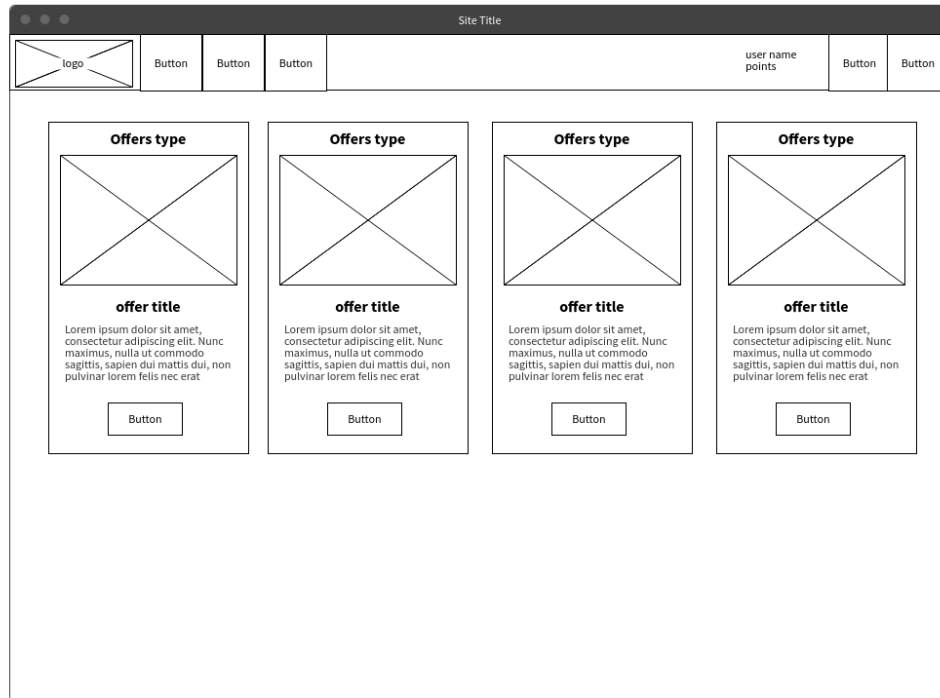

## 4 User Profile screen

The wireframe shows a user profile interface. At the top, a dark navigation bar contains a logo placeholder, three buttons, a 'user name points' label, and two additional buttons. Below this, the main content area is divided into three sections. The first section, 'User information', lists user details: User name, E-mail, phone Number, member Number, points, member status, and date joined. The second section, 'Update contact details', includes input fields for E-mail and phone number. The third section, 'Update password', includes input fields for Password and Confirm Password. A single 'Button' is centered at the bottom of the main content area.

This is the wire frame concept for the user profile screen this will be the screen that users will be presented with when viewing their user information, on this screen users will be able to update their contact details in the system as well as change their password. As with the main loyalty program screen this user profile screen has the same top navigation bar to keep the flow of consistence between the screens and allows for users to navigate to any other screens. The first part of this is the user information that will display all the user details relevant to the user account, the next part is the update part where the user will be able to change there contact details and password. These parts could have been on separate screens, but we thought that it was more appropriate to combine them in the one place but clearly marked and labelled to allow the user to identify the different sections.

## 5 Coupon screen

This is the wireframe concept for the coupon screen which users will be presented with when viewing available coupons that will be updated on a regular basis providing users with more ways to benefit from this system. The top navigation bar as with all the other screens is the same as it provides a consistent element that ties the screens together and allows the user to navigate to the other screens from any of the screens. The main part of this screen is the coupons that will be arranged in a grid on the screen allowing users to view all the different types of coupons available at that time.

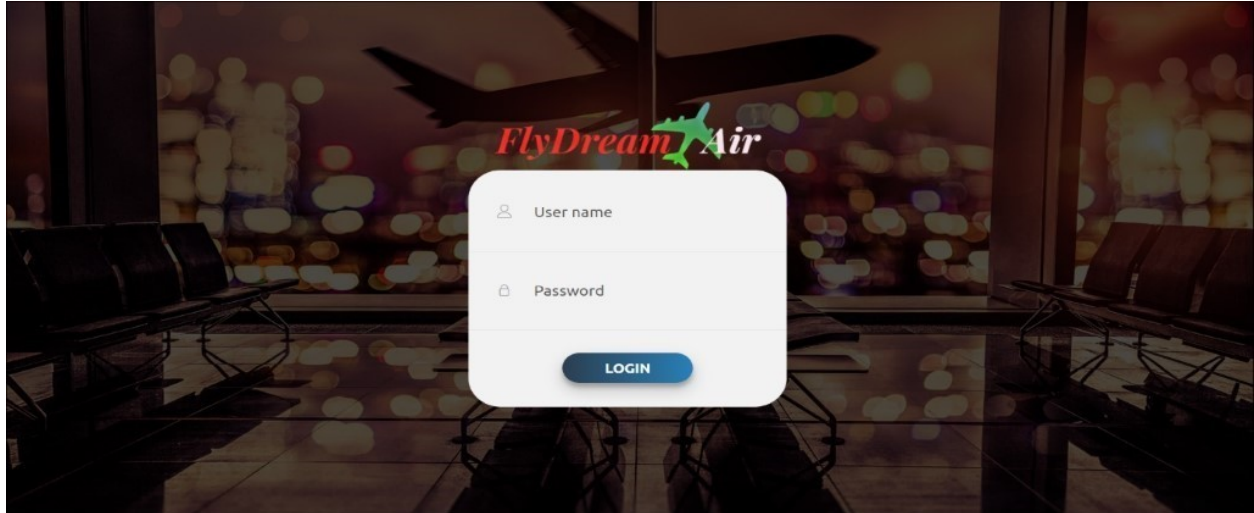

## 6 About screen

The wireframe shows a web page layout for 'FlyDreamAir'. At the top is a navigation bar with a logo placeholder, three generic buttons, a user profile section labeled 'user name' and 'points', and two more generic buttons. Below the navigation bar is a large grey box containing the 'FlyDreamAir' logo and a 'Subscribe to newsletter' form. The form includes input fields for 'name' and 'Email address', a checked checkbox, and a 'Button'. Below the grey box is a white section titled 'About us' containing a paragraph of placeholder text and a 'call us (phone number)' button.

This is the wireframe concept for the about screen where a user will be able to view information and contact details of FlyDreamAir it also features a form to allow users to receive newsletters from FlyDreamAir. The screen was split into two parts the first is the newsletter subscription form at the top of the page being the first thing users are most likely going to see, increasing the likelihood that users will subscribe to the newsletter, then the second part is all the company information and contact details. Again, this screen features the top navigation bar for users to quickly navigate to other screens and provide a common element across all the screens tying them together to indicate to the user that they are all a part of the same webpage.

## 7 Mockup Content

### 7.1 Login Screen

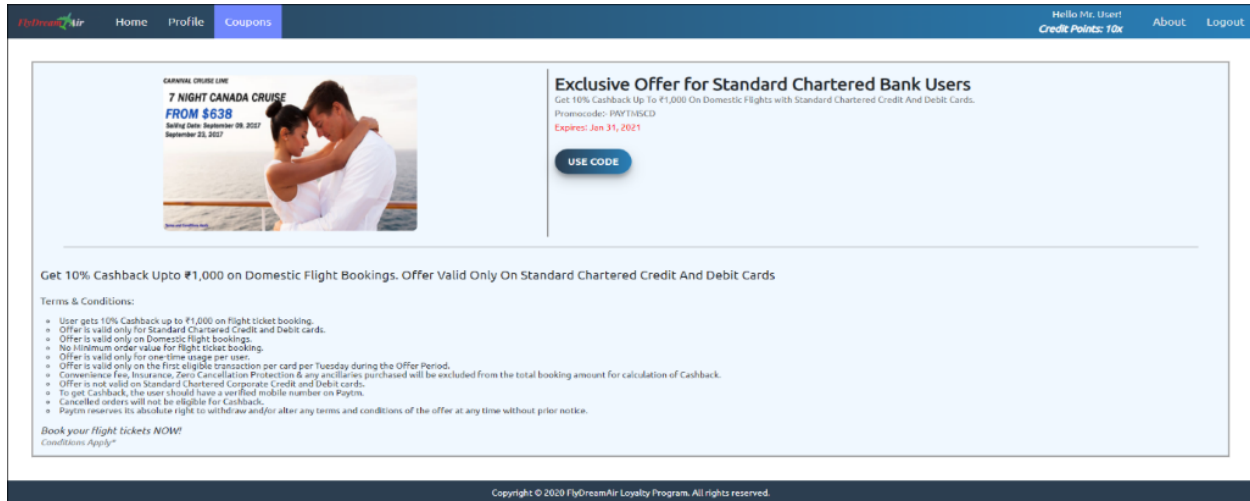

This screen has the added mock-ups to showcase the login feature for the FlyDreamAir loyalty program web application. In this screen, the background image shows that this website mainly focuses on the loyalty programs service for the flight bookers. So, a picture containing a flight with the inside airport view has been kept in the background. There is a logo of this loyalty program written as the name of the organization “FlyDreamAir” with a flight symbol, colored red for the word “FlyDream” and green-blue shade for the “flight symbol” and white for the word “Air”. In the center, there is a container as a form in a very light gray color with a smooth border-radius of 40px. Inside this form, there are two input layers for login username and password with animations such as user symbol, lock symbol, and line on hover in a strong pink color. Throughout the entire application, only the font-family of Ubuntu with the properties such as regular and bold has been used for the text. Login input is a text format and the password input is in dots in black color. There is a button after the input spaces in the color gradient from very dark blue to strong blue with the shadow. On hover, the displays in a very light gray color. Inside the button, the text Login is styled with properties such as uppercase, 18 px font size, bold and white color.

## 7.2 Home Screen

This screen contains the navigation bar in the header part of the page with the same color properties as buttons on the entire website. The same navigation bar is used throughout the FlyDreamAir website. The navigation is placed at the top with margin 0 and has a division to navigate to different pages such as Home, Profile, Coupons, About, and Logout. The logo image is displayed in the foremost place of the navigation bar and also displays the user information with credit points. The text color used here is white. On hover, each division will display in white text with gray background colors. To the current screen in the navigation bar, the particular division highlights in Soft blue color. In the footer part, there is a text to mention the copyrights in white color with a very dark blue background. In the center, there is a row flex container with two columns to display the user offers and general offers, with the groove border and background with a very pale blue color. Inside each column, the images for the offers are displayed using the vertical carousel with the image fixed size width 640px & height 360px and carousel slider in dark cyan color with a border size of 3 px.

## 7.3 Offer Detail Screen

**7 NIGHT CANADA CRUISE**  
FROM \$638  
Selling Date: September 08, 2027  
September 23, 2027
